

# Allianz RCM Dynamic Growth Fund

2nd Quarter, 2010

## Investment Strategy Objective

The RCM Dynamic Growth Fund aims to achieve long-term capital growth. To achieve this objective we seek to diversify the portfolio across a broad range of underlying global asset classes in order to deliver equity-like returns at lower volatility. The portfolio manager's performance objective for the fund is LIBOR + 4% over a market cycle.

## Dynamic Growth Philosophy

RCM's investment philosophy is based on the belief that by generating and exploiting an information advantage we can provide superior and consistent investment results for the benefit of our clients - a philosophy we call RCM informed. Within this context RCM's Systematic Multi-Asset team believe that market inefficiencies can be exploited systematically using well researched and disciplined investment processes that combine fundamental knowledge and advanced risk management skills.

## Investment Approach

RCM's Dynamic Growth Fund offers pension funds and institutional investors a realistic, lower risk alternative to equity only investment. Our solution benefits from several unique components; the most important being the use of an in-house, dynamic, quantitative asset allocation process that captures strengths within and among asset classes. Like our competitors, active tactical asset allocation is also a significant element of portfolio construction, though it is one part of a larger investment decision process. In addition, the fund is able to offer downside protection in times of market stress through our proprietary total return risk management approach.

## Investment Rationale

- The diversified nature of the portfolio is intended to deliver an attractive risk reward profile for investors.
- RCM's Dynamic Growth Fund is predicated on the belief that in order to meet the objective there is a need to include dynamic and tactical asset allocation, coupled with sophisticated total return risk management tools for downside protection.
- With an unconstrained asset allocation approach we can increase asset exposure from 0% to 100%, for growth assets in bull markets, and hold more defensive assets (up to 100%) in bear markets.
- Through our proprietary total return risk management approach we can offer downside protection in times of market stress.
- Investing primarily in ETFs can provide more liquid, cost efficient and effective exposure to underlying asset classes\*.

## The RCM Advantage

- Global investment infrastructure.
- RCM's Dynamic Growth Fund team has a depth of proven investment and quantitative modelling experience and extensive complementary skills.
- The team draws on the broad experience within the wider Systematic team:
  - 33 experienced portfolio managers offering ongoing research into market anomalies.
  - Over £26.3 billion asset under management, of which £19.6 billion multi-asset mandates (as at 31 May 2010)
  - Extensive experience of managing tactical, dynamic, protected and absolute return multi-asset portfolios.
- The team benefit from the research generated across RCM's Global Platform:
  - Over 260 investment professionals located across the globe.
  - RCM's Global Policy Council comprising 13 economists and strategists.
  - Over 60 fundamental research analysts organised by sector.
  - Grassroots® Research with a network of circa 300 independent journalists and field force researchers, with over 50,000 industry contacts.\*\*
- A boutique culture offering dedicated business professionals engaging with clients proactively in partnership.

Disclosure period restrictions result in top five holdings being provided at a one month lag.

**Past performance is not a reliable indicator of future performance.** The value of an investment and the income from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested. Hypothetical or simulated performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Additionally, since the trades have not actually been executed the results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity.

The Allianz RCM Dynamic Growth Fund aims to achieve capital growth principally through investment in a broad range of underlying global asset classes. The fund mainly invests in Exchange Traded Funds (ETFs), however, the fund may also invest in other instruments including collective investment schemes, equities, fixed income securities, money market instruments, cash and derivatives such as index based total return swaps, equity based total return swaps and currency forward contracts.

Portfolio holdings are subject to change without notice and should not be considered a recommendation to purchase or sell individual securities. The information is for the sole use of the addressee, who it is believed are professional clients as defined by the Financial Services Authority.
